Formal Review Document

Our team met and conducted our review with our coach, Akhilesh Reddy, on Monday, May 10th at 2pm. After doing a brief walkthrough of our product, Akhilesh was able to confirm that our software met the requirements and ensured that the software had been represented according to the predefined standards. This included a demonstration of using the login, the GUI, and how the data from the sensors is processed by IoT. There were no errors uncovered in function, logic, or implementation for any representation of the software. After the review, the attendees of this meeting voted to accept the product without further modification.
